

Damask Patterns

Special Trimming Instructions:

These fine wallpapers are hand-printed and are designed to be hand-trimmed. These instructions will help to choose the trimming method that best suits both the installer and the installation. Please read and understand these instructions fully before starting your project.

Wallpaper can be dry or wet (double-cut) trimmed according to your expertise. Our damask patterns are printed on 30" wide paper, the finished pattern width will always be 27". There is a strip of excess pattern along the vertical edges of the paper to allow for pattern matching of each strip of paper. This excess will be approximately the outer 1/4" of the print.

To trim: Use our basic trimming instructions from the Installation Tips sheet sent with your order. Locate the pattern repeat at the edge of the paper. Line up your straight edge down the center of the pattern element which is about 1/4" from the edge of the printed area (see diagram below).

Note: For best results we recommend a clay-based adhesive.
